REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The specific limitations of "a working structure having a two-component system, a first component comprising a fibrous component (14), and a second component comprising a polymer matrix component (16), wherein the fibrous component is distributed throughout at least an upper portion of the working structure, the fibrous component comprising fibers soluble in a slurry to provide a void structure in the work surface" **in the combination as claimed in claims 1, 29**, are not anticipated or made obvious by the prior art in the examiner's opinion. For example Lindholm et al. (5,632,668) disclose a non-woven polishing pad for polishing a substrate in a presence of a slurry, comprising abrasive particles and a dispersive agent, said polishing pad comprises a layer having a polishing surface and a backing surface having an adhesive layer. However, the prior art of record considered as a whole, alone or in combination, fails to provide or suggest "a polishing pad comprising a working structure having a two-component system, a first component comprising a fibrous component, and a second component comprising a polymer matrix component, wherein the fibrous component is distributed throughout at least an upper portion of the working structure, the fibrous component comprising fibers soluble in a slurry to provide a void structure in the work surface".

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
